

AmirHossein Dolati

Date of birth: 12/04/2000 | Place of birth: Tehran, Iran | Phone: (+98) 9190953651 (Mobile) | Email address: amirHossein_dolati@outlook.com | Website: www.amirhdolati.github.io/resume | LinkedIn: www.linkedin.com/in/amirhossein-dolati-b26a1a109/ | Address: Tehran, Iran (Home)

About me

Senior Software Engineer and Tech Lead with 6+ years of experience building high-performance backend, distributed, and embedded systems. Strong background in **Go and C++**, with experience designing production-grade fintech platforms, payment systems, API gateways, real-time systems, and developer infrastructure. Experienced in **system architecture, technical leadership, and AI-assisted development**, with a strong focus on building reliable, scalable, and high-performance software.

Work experience

Tech Lead / Senior Software Engineer | Injast (Entekhab Group) | 04/10/2025 - Current | Tehran, Iran

- Owning the development of several core fintech products and services while supporting the engineering team.
- Led development of core systems using **Go (Golang)**, including Exchange, BNPL, SOD, Super App services, Payment infrastructure, and production API Gateway.
- Designed and maintained authentication, authorization, and API security, as well as service switching and payment infrastructure across the platform, primarily using Go.
- Designed **Technical Requirements Documents (TRDs)** and contributed to system architecture and technical design for several core services, defining service boundaries, interactions, and implementation approaches.
- Developed **reusable token-mining engines** for in-app mini-games, designed to be secure and cheat-resistant while enabling users to earn the platform's native currency across multiple games.
- Established **AI-assisted development workflows** and project-specific AI skills to improve team productivity.
- Re-engineered the development deployment workflow, reducing deployment time by approximately **90%**, from 15–20 minutes to 1–2 minutes.

Business or sector Financial and insurance activities | **Email:** info@injast.life | **Website:** injast.life

Embedded Software Engineer | Software Motion | 01/05/2024 - 01/04/2025 | Suzhou, China

- Worked on **self-driving automotive systems**, focusing on ADAS development and AUTOSAR-based solutions.
- Implemented a module to visualize data in RVIZ using RVIZ APIs.
- Developed modules to establish connections between various components using **ROS**, C++, and Python.
- Created modules using a **code auto-generation approach** to reduce development time and improve development efficiency.
- Developed a library for **LiDAR point-cloud preprocessing** using a node-based architecture.
- Maintained and improved legacy code, ensuring stability and compatibility with existing systems.

Software Engineer | IPAC | 01/10/2022 - 01/05/2024 | Tehran, Iran

- Developed a client-server file synchronization project using **C++**.
- Developed encryption and decryption clients using a node-based architecture.
- Developed several responsive user interfaces (UIs) using **QML**.
- Created a **peer-to-peer (P2P) messenger application** for Android and Windows using **Qt/QML 6.5**, integrating native Java and C++ code. Established connectivity between the application and SQLite by implementing a custom QML model in C++.
- Conducted Proof-of-Concept (PoC) research in **Kotlin Multiplatform**.

Software Engineer | Ai-Bridge | 01/02/2022 - 01/07/2022 | Stuttgart, Germany

- Developed an installer utilizing the **Qt Installer Framework**.
- Created a client application using **Qt/QML**.
- Successfully resolved the challenge of establishing efficient **inter-process communication (IPC)** between Python and C++ processes.

Software Engineer | Freelance | 01/07/2022 - 01/09/2022 | Germany

- Developed a **packet forwarding service** for **custom embedded devices**.
- Collaborated on a project involving **human smile detection** using an **ESP32-CAM** board.

C/C++ Developer | FD Eshragh | 01/11/2020 - 01/04/2022 | Tehran, Iran

- Developed a **multi-user server** facilitating real-time data delivery including voice, text, and GPS coordinates between users across different client and server types. Implemented thread-safe mechanisms to ensure data synchronization and achieved low-latency VoIP communication.
- Restructured the user interface (UI) of an embedded device using the **LVGL framework**.
- Conducted debugging and troubleshooting activities on a legacy codebase.
- Developed several development and utility tools using **Qt** and QWidget.

Business or sector Information and communication

Education & Training

Bachelor of Computer Science | Azarbaijan Shahid Madani | 01/09/2018 - 01/06/2023 | Tabriz, Iran

Final grade: 3.2/4 | **Thesis:** open source VoIP application written in C++/Qt/QML | **Website:** https://intl.azaruniv.ac.ir/

Master of Data Science | Payame Noor | 01/10/2025 - Current | Tehran, Iran

Website: http://www.pnu.ac.ir

Language Skills

Mother tongue(s): **Persian**

	Understanding		Speaking		Writing
	Listening	Reading	Spoken production	Spoken interaction	
English	C1	C1	B2	B2	C1

Skills

Go | C++17 | C | Python | Matlab | QML | Dart | Qt | Flutter | MySql | Ai Agents | Ai Asisted Development | Concurrent Programming | Git | Network | PostgreSQL | SQLcipher | SQlite | VoIP | Autosar | ROS | HMI | Kafka | Fintech | Distributed systems | Exchange
